Windowmaker 2024 R1.2

General Enhancements

Products – Systems – Rules

New four features such as "A-----A: Inside", "A-----A: Outside", "B-----B: Inside", "B-----B: Outside" are introduced. They are available for Frame, Sash and Glass level at any sides.

Rules Execution:

The rule with feature: "A-----A: Inside" at a side will be passed when either Bay pole or Coupler A exists at the side.

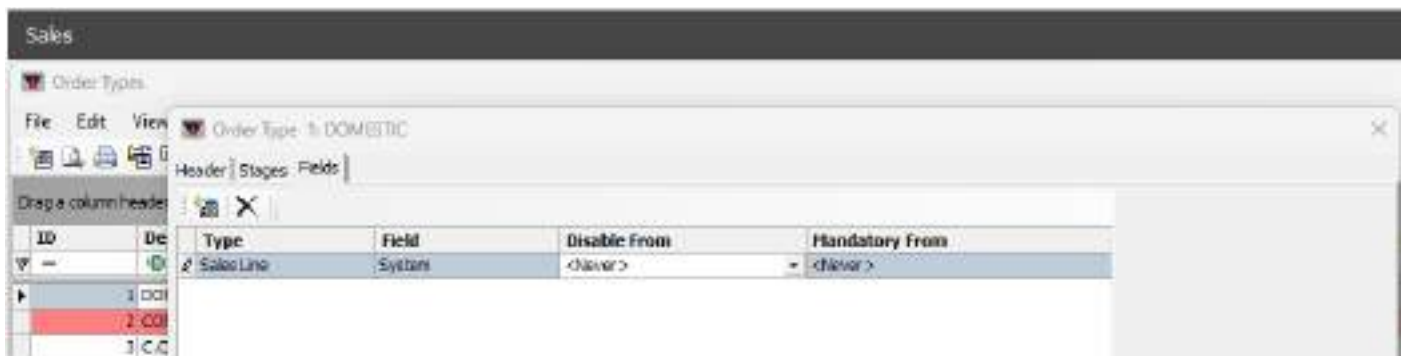

The rule with feature: "B-----B: Inside" at a side will be passed when Coupler B exists at the side.

The rule with feature: "A-----A: Outside" at a side will be passed when the side is an Overall side and if no feature is applied at the Overall side or Feature A is applied.

The rule with feature: "B-----B: Outside" at a side will be passed when the side is an Overall side and if Feature B is applied at the Overall side.

Sales – Order Entry – Sales Lines

It is now possible to prevent users from changing System on a Sales Line from a particular Status, say, after survey.

Enhancements to Options

Bar Optimisation III, Link to Working Centre

For pieces with length greater than the bar length, machining operations are now generated correctly for the spliced pieces.

Revisions

An older revision of a Sales Quote can now be activated and made live. The live version will be flagged as a revision.

Issues Fixed

Sales – Order Entry – Convert Quote to Order – 49000

If a user did not have Sales Order - Input right, the user could progress his own Quote to Order. This is now corrected.

The absence Sales Order- Input right will continue to restrict users from creating Orders using other means such as the "New" button.

Sales – Order Entry – Deposit – 48943

Deposit edit box was disabled on Pricing page for users without the 'Link to Sales' checksum. This is now enabled again.

Sales – Order Entry – 49157

The buttons to add a Sales line were greyed out if a user visited the "Where used" page of a Design in Products department and subsequently returned to add a sales line. This is now corrected.

Sales – Order Entry – Calculation – 49201

When a length or profile part was calculated by rule having Where: 'Width + Height', its size was calculated incorrectly, if the size exceeds a certain value. This is now corrected.

Sales – Order Entry – 35485, 41504

The Short Production and Installation Note fields on a Sales line were not copied during the conversion of a Sales Quote to Order or during the copy operation. This is now corrected.

Sales – Order Entry – Stage sub orders – Purchases - 48709

When a Sales line was updated in a Phased Order that required components to be purchased from a different Supplier, the subsequent propagation of the change to the Stage sub order did not result in the generation of the purchase for the new Supplier for that sub order. This is now corrected and the purchase and its contents will be available for further processing.

Manufacturing – Process – Link to Working Centre – Operations – 35345

MET Operation was not reflected in Station Transactions when it is generated on section other than B0 and the other end is welded. This problem is now solved.

Manufacturing – Process – Link To Welders – 34560

Link to Welder file was not generated for Stage Sub-order or Remake Orders. This is now corrected, and welder links have started functioning for such types of Sales Orders.

Manufacturing – Process – 49180

Processing a batch with orders created by dealers sometimes crashed due to incorrect values in some fields of some sales lines. This is now rectified.

Products - Import – 48638

While importing CUP of Systems in the Main module, the existing system was over-written by a different system even if their names did not match. This is now fixed.

Sales – Order Entry – 31511

Changes in design setup are not reflected in order entry unless user exit WM. This is now corrected.

Sales – Dealer Client – Pricing -33797

Incorrect Pricing in the Dealer Client program when no Markup was specified on Application Settings is now rectified.
